

DEFEND AND SURVIVE

BUILDING YOUR SHELTER

Local authorities will do everything possible to ensure that you are able to reach a safe and secure evacuation centre in your area. However if this isn't possible, you will need to fortify your home.

FORTIFYING YOUR HOME

To fortify your home you will need a full set of tools. You will also need a good supply of wooden boards. If this is unavailable, try taking apart bookshelves, tables and other wooden furniture. Heavy objects like fridges can also be stacked against windows and doors.

- Cover or board up all windows
- Ensure doors are kept locked
- Avoid loud noises or music
- Prevent any light or movement being visible outside

it doesn't matter they can smell you

*ALSO A TIN OPENER!
WE NEARLY STARVED TO DEATH!
and a bucket to use as a toilet
Also at least one window and lots of bleach!*

CHOOSING A FALLBACK ROOM

In the event that your home's defences are breached, you need a room you can retreat to. This room should be:

- Furthest possible room from the outside walls
- In a house the safest room will be on the ground floor or basement
- Should contain large reserves of drinking water and tinned food
- Should also have internet access, or be close to your wireless router

WRONG!

Upstairs is safer!

What if there's a fire?

why would you start a fire

moron?

*SOFT toilet paper!
And some board games
But NOT monopoly!*

BUILDING YOUR INNER REFUGE

Your fallback room should also contain an inner refuge, a last resort in case all defences are breached. This can be made by:

- Making a lean-to using wooden boards or doors taken off their hinges and leaned against the wall
- Stacking dense material against the lean-to in order to conceal it/ make it tougher to break into
- Keep defensive, long-handled weapons such as spades and pitchforks here

Yeah. I tried this. It fell over

it turns out I really needed those doors to keep the zombies out

I made mine out of pillows. Still useless when the zombies broke in, but at least it was comfy.

*Don't use a CHAINSAW
That goes badly.*
